I want to buy a home, please help me.

10:40:28 AM

I am Advaith AI, the assistant for this website. I can help you navigate the home-buying process by providing educational resources, independent guidance, and personalized strategies to help you make confident decisions.

Whether you are a local or international buyer, I can assist you by:

- **Providing Property Guidance:** Helping you understand property information, prepare questions, and identify necessary professional checks before you commit.
- **Supporting International Buyers:** Acting as your physical representative in the UK to conduct viewings, provide video tours.

ChatbotAgent

A self-hosted RAG chatbot
that answers from **YOUR** content

Faster replies

Repeat questions in around a second.

Lower costs

The AI is only called when necessary.

Accurate answers

Grounded in your own content.

How a question flows

Cheapest option first. The AI is only called when it has to be.

Tech Stack

Also included

- Roles and fine-grained permissions, enforced on the server
- Audit log of admin actions
- Voice conversations: speak, and hear the answer back
- RAG-based answers grounded in your own content
- Semantic caching
- FAQ and predefined answer layers
- Fallback handling when AI is unavailable

Run it for \$0

Free tiers, step by step

3 steps

Get your chatbot up and running on free tiers.

1

Create the database and run the migrations

Set up Supabase or Neon, enable pgvector, and run the migrations from the repo.

2

Deploy the API and set your keys

Deploy the Node.js + Express API on Render and add your environment variables (AI keys, database URL, etc).

3

Deploy the admin panel and paste the widget script

Deploy the React + Vite admin panel on Vercel and paste the widget script on your website.

Full guides in the repo: [docs/hostingsupport](https://docs.hostingsupport.dev)

Built for teams

- ☒ View content
- ☒ Edit content
- ☐ Manage users

Roles and permissions

create a role like 'Content Creator' and choose exactly what it can do.

- Content updated
- User added
- Settings changed
- Role modified

Audit log

every important change is recorded.

Server-side security

permissions are checked on every request.
